

How to Setup a VPN in OSX

Open "System Preferences" from the finder menu...

3. On the System Preferences pane, click "Network" :

4. In the Network configuration window, find and click "VPN (PPTP)" in the list on the left side of the window. This will show the configuration screen for setting up a VPN connection.

5. Enter the following details:

Server Address: uk1.focusvpn.com

Account Name: your username you setup when you created your account.

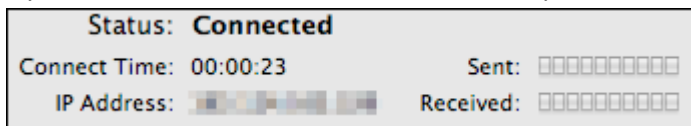

Click Connect...

If all goes well, a box will pop up asking for your password. Enter the password you setup and press "OK."

6. Your computer will now finish connecting to your FocusVPN.

If your connection is successful, the VPN Setup window will change to show that you are connected.

Surf securely and anonymously!

Regards,

FocusVPN
